DETAILED ACTION

1. Claims 1, 4, 8, and 11-15 are allowed. Claims 2, 3, 5-7, 9 and 10 are cancelled.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert P. Michal on 04/27/2006.

3. The application has been amended as follows:

In the claims:

- a. Claims 2, 3, 5-7, 9 and 10 are cancelled
- **b.** Claim 13 (Currently Amended). A method of enabling interactions between a Non-IP network and an IP network, comprising:

establishing an IP connection between a browser on the IP network and a server at a bridge element through an IP to Non-IP interface,

communicating a web page corresponding to the server <u>on a Non-IP network</u> to the browser <u>on an IP network through a Non-IP to IP interface</u>,

operably coupling a Non-IP Web proxy to an IP web client and the Non-IP network,

operably coupling a Non-IP Web proxy client to the Non-IP Web proxy and Non-IP network,

receiving a user input from the browser to the server, based on the web page, processing the user input to produce one or more commands related to an object on the Non-IP network, and

communicating the one' or more commands to the object, wherein a first set of communications are selectively translated via a translation manager operatively connected to the Non-IP Web network and suitable to provide service-to-user-interface and message-to-methods translation services, and passed between the browser and the Non-IP network, and a second set of communications are passed between the browser and the Non-IP network without translation.

In the Specification:

c. Please replace the paragraph beginning at page 12, line 5 with the following paragraph:

The Service-to-UI facility maintains the mapping between the methods defined in the web service executor 360 and the objects, such as URLs, buttons, forms, text blocks, and so on that are used the web page generator 370 for composing web pages. In addition to URL links, GUI widgets, the components 360, 370 can also include semantic information in forms of tagged strings, Java code and others. Copending U.S. patent application, "CONTROL PROPERTY IS MAPPED ONTO MODALLY COMPATIBLE GUI ELEMENT", serial number 09/165,682, now U.S. Patent No. 6, 434, 447 Attorney docket PHA 23,484, filed 2 October 1998 for Eugene Shteyn, teaches the mapping of data to GUI objects, based on the types of data, and is incorporated by reference herein. For items that do not have conventional data types, the Service-to-UI

facility provides mapping tools to assist map building. In one embodiment, for example a mapping tool provides a GUI that lists the items to be mapped, and allows the user to select and link the mapping parties.

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance:

Applicant's arguments presented in the appeal brief are persuasive with respect to Eytchison (US 2001/0047431) teaching only a single bridge and is not teaching two distinct interfaces as claimed, as well as the bridges between an IP network and Non-IP network, each with dedicated components as claimed along with other claim limitations. None of the prior arts of record teach or fairly suggest the claimed limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ashok B. Patel whose telephone number is (571) 272-3972. The examiner can normally be reached on 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John A. Follansbee can be reached on (571) 272-3964. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 09/736,069

Art Unit: 2154

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

A user can activate the active components via the browser 210 to send requests and/or responses to the corresponding objects 240, 250. Encoding of the messages is pre-defined and can be attached to the user-interface objects associated with each object 240, 250 to form proper responses.

The Service-to-UI facility maintains the mapping between the methods defined in the web service executor 360 and the objects, such as URLs, buttons, forms, text blocks, and so on that are used the web page generator 370 for composing web pages. In addition to URL links, GUI widgets, the components 360, 370 can also include semantic information in forms of tagged strings, Java code and others. Copending U.S. patent application, "CONTROL PROPERTY IS MAPPED ONTO MODALLY COMPATIBLE GUI ELEMENT", serial number 09/165,682, Modern 1998 for Eugene Shteyn, teaches the mapping of No. 6,434, 444/ data to GUI objects, based on the types of data, and is incorporated by reference herein. For items that do not have conventional data types, the Service-to-UI facility provides mapping tools to assist map building. In one embodiment, for example a mapping tool provides a GUI that lists the items to be mapped, and allows the user to select and link the mapping parties.

The Service-to-UI facility provides the translation services for generating web pages. For a HAVi network, there are three paths to generate web pages: (1) based on registry and device properties, (2) based on DDI (Data Driven Interaction), and (3) via Havlets, discussed further below.

The first path, based on registry information, is best understood using an example. In the case where a user clicks the link "list all devices" in the server's home page, this mapping facility accesses the HAVi registry on the HAVi network 130 to get the HAVi Identifications for all installed devices 250. If the user requests "list all TV tuners that support MPEG2", the mapping facility accesses device properties to select the devices 250 that match the request. It then creates a link in the web page for each selected device. Preferably, the text of each link clearly indicates the device. One way to generate the text is to use device parameters such as device name, user preferred name, manufacture name, and device type. If the user then clicks on a specific device, the HAVi web server 350 retrieves the device's ID in the HAVi network 130 from its browser-HAVi object mapping and invokes the web page generator 370 to generate the page for the device. The mapping facility then accesses the device capabilities and the current state(s) of the selected device. In a preferred embodiment, the Service-to-UI facility uses a
